

A. R. Onojeghuo

PhD, Geog (Sci)

Data Scientist/GIS & Remote Sensing Specialist

(a) Total Rides Per Week

About me

I'm a result-oriented and experienced Data Science, GIS & Remote Sensing Specialist with over 10 years of experience. I have hands-on experience using Excel, Tableau, SQL, R (ggplot2, tidyverse, Rmarkdown, leaflet, knitr), Power BI, ArcGIS, and more for data analytics and visualization. I have a good command of English and relay technical results in simple terms

Skills & expertise

Tailored
Geospatial/
Data
Analytics &
Reporting

R (Leaflet,
ggplot2, knitr,
tidyverse &
more), SQL,
Python

ArcGIS,
Power BI,
Tableau

HTML,
CSS, JS

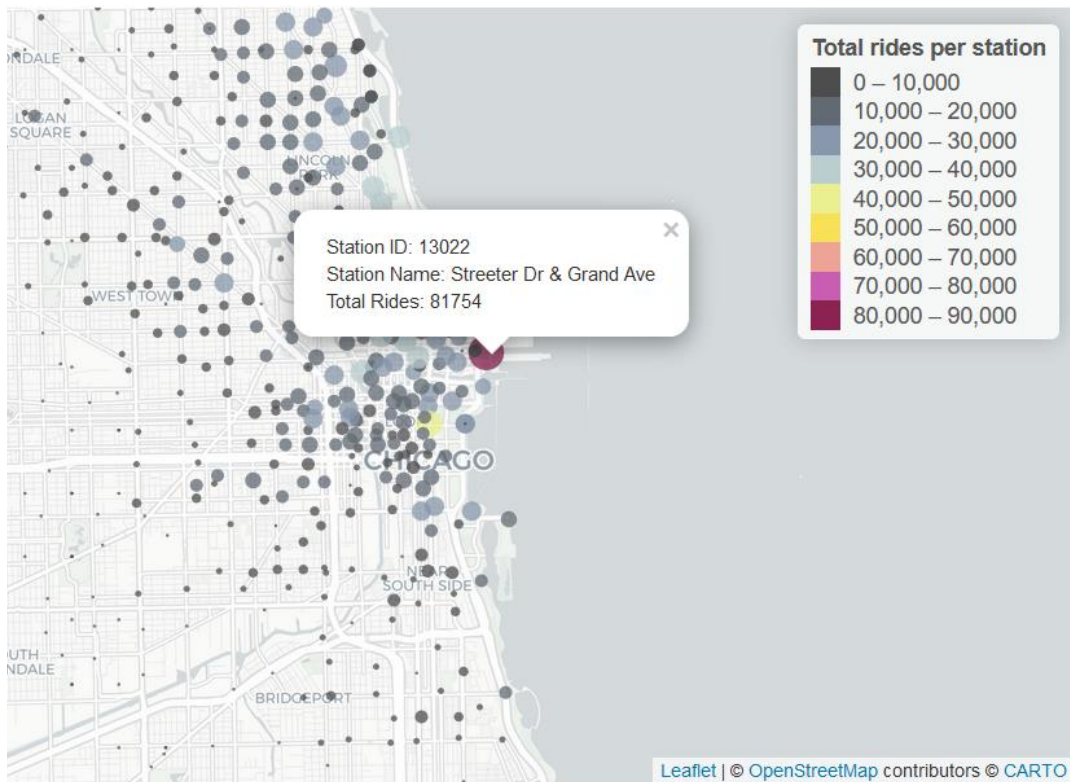

Total rides per station

Portfolio samples

Bike-share trend analysis using R

- Analysis to determine bike-share trends in the Chicago area for Cyclistic (Apr 2021 - Mar 2022).
- Data was downloaded from <https://divvy-tripdata.s3.amazonaws.com> under a license agreement for educational purposes.
- Data download, unzipping, merging and cleaning was done in R.

Bike-share trend analysis (contd.): Sample R code for descriptive analysis

```
SA <-read_csv("Cyclistic202104_202203.csv" )
##Delete duplicate ride ids and fill in missing values using other similar rows
S1 <- SA %>%
  group_by(start_station_id,start_station_name) %>% fill(start_lat, start_lng) %>% ungroup %>%
  group_by(end_station_id,end_station_name) %>% fill(end_lat, end_lng) %>% ungroup %>%
  group_by(start_lat, start_lng)%>% fill(start_station_id,start_station_name) %>% ungroup %>%
  group_by(end_lat, end_lng) %>% fill(end_station_id,end_station_name) %>% ungroup

##distinct(ride_id, .keep_all= TRUE) %>%

#%>% group_by()
S1$RideLength <- difftime(S1$ended_at, S1$started_at,units="mins")
##Extract day of the week. 1=Sunday and 7 is Saturday
S1$day_of_the_week<-wday(S1$started_at)
S1$Hour <-hour((S1$started_at))
S1$Month<-month((S1$started_at))
S1$Wd2 <-wday(S1$started_at,label=T)

##List all files
L1 <- list.files(pattern = "20" )
##Create empty list to store column names
XLlist <-list()
##read files and extract column names
for (i in L1) {
  A1 <- read.csv(file = i, header = T)
  A2 <- as.data.frame(colnames(A1))
  XLlist[[i]] <- A2
}

XLlist2 <- list.cbind(XLlist)
L2 <- L1 %>%
  lapply(read_csv) %>% # Store all files in list
  bind_rows # Combine data sets into one data set
write_csv(L2,"Cyclistic202104_202203.csv")
##Test all columns ADT key if needed
```

Bike-share trend analysis (contd.): Most popular bike-share station

```
##To find the mode of the months of incidents
```

```
Mode = function(x){  
  ta = table(x)  
  tam = max(ta)  
  if (all(ta == tam))  
    mod = NA  
  else  
    if(is.numeric(x))  
      mod = as.numeric(names(ta)[ta == tam])  
    else  
      mod = names(ta)[ta == tam]  
  return(mod)  
}
```

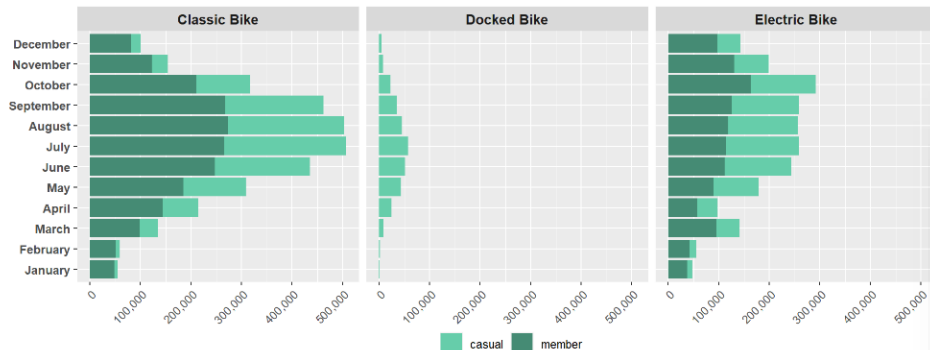

```
MinMode <- function(x){  
  ta = table(x)  
  tam = min(ta)  
  if (all(ta == tam))  
    mod = NA  
  else  
    if(is.numeric(x))  
      mod = as.numeric(names(ta)[ta == tam])  
    else  
      mod = names(ta)[ta == tam]  
  return(mod)  
}
```

```
S2 <- S1 %>% filter(!start_lat >= 45) %>% group_by(member_casual) %>%  
  summarize(Most_popular_takeoff_Station_id=Mode(start_station_id),  
    Most_popular_takeoff_Station=Mode(start_station_name),  
    Most_popular_destination= Mode(end_station_name), Mosttravelled_Hour=Mode(Hour),  
    Weekday_most_travel= Mode(day_of_the_week), Mean_rideLength=mean(RideLength),  
    Max_rideLength= as_hms(max(RideLength)), Month_Most_Travel=Mode(Month))  
write.csv(S2, "Cyclistic_summary2.csv")
```

grid.arrange(A,B,ncol=1)
```

Bike-share trend analysis (contd.): Weekly bike rides by members and casual riders

- More casual riders used the bike-share service in summer months and on weekends (suggesting leisure & tourism related travel)
- Bike-share was mostly from Station 13022 (Streeter Dr & Grand Ave) for casual riders and from Kingsbury St & Kinzie St for annual members
